ASD Data: Lines Levels Information: List of Spectra Ground States & Ionization Energies Bibliography Help

NIST National Institute of Standards and Technology Physical Meas. Laboratory

NIST Atomic Spectra Database Lines Form

Best viewed with the latest versions of Web browsers and JavaScript enabled

Main Parameters **Spectrum** H I; He I; Li II; Be III *e.g.,* `Fe I` *or* `Na;Mg; Al` *or* `mg i-iii` *or* `198Hg I`

Search for Wavelength **Lower:** 200 nm
Upper: 2000 nm

Output Wavelength Units: nm

Can you please provide some feedback to improve our database?

Output Options

Format output: CSV (text)

No JavaScript ☑
No spaces in values ☐

Energy Level Units: cm-1

Display output: in its entirety

Page size: 15

Output ordering: ◉ Wavelength ○ Multiplet

Additional Criteria

Lines: ◉ All
○ Only with transition probabilities
○ Only with energy level classifications
○ Only with observed wavelengths or intensities
○ Only with diagnostics
☐ Include Ritz wavelengths for all possible E1 transitions

☐ Include diagnostics data

Bibliographic Information: ☑ TP references, Line references

Wavelength Data: ☑ Observed
☑ Ritz
☐ Observed - Ritz (difference)
☐ Wavenumber (in cm^{-1})
☑ Uncertainties

Optional Search Criteria

Maximum lower level energy: (e.g., 100000)

Maximum upper level energy: (e.g., 400000)

Transition strength bounds will apply to: Aki

Minimum transition strength: (e.g., 1.2e+05)

Maximum transition strength: (e.g., 2.5e+12)

Accuracy minimum: (e.g., C+)

Relative intensity minimum: (e.g., 1.2e-03)

Wavelength in: ○ Vacuum (< 200 nm) Air (200 - 1,000 nm) Wavenumber (> 1,000 nm)
○ Vacuum (< 1,000 nm) Wavenumber (> 1,000 nm)
◉ Vacuum (< 200 nm) Air (200 - 2,000 nm) Vacuum (> 2,000 nm)

○ Vacuum (all wavelengths)
○ Vacuum (< 185 nm) Air (> 185 nm)

Transition strength: ◉ A_{ki} ○ g_kA_{ki} ☐ in units of 10^8 s^{-1}

☐ f_{ik} ☐ S_{ik} ☐ log(*gf*)

☑ Relative Intensity

Transition Type: ☑ Allowed (E1) ☑ Forbidden (M1,E2,...)

Level information: ☑ Configurations ☑ Terms ☑ Energies ☑ *J* ☐ *g*
